PROFILE

Cybersecurity-focused Computer Science student (Boise State University, graduating Dec. 2026) and U.S. Marine Corps veteran with three SANS/GIAC certifications (**GSEC, GCIH, GFACT**), seeking a Junior Cybersecurity Analyst role. Designs, secures, and monitors a self-hosted virtualized lab built on network segmentation, firewall rules, key-only SSH, and log-driven incident investigation. Leads technical teams and delivers reliable results under pressure.

TECHNICAL SKILLS

- **Security & Networking:** Network segmentation, firewalls/NAT (iptables), TLS/PKI, DNS filtering, Fail2Ban, SSH hardening, incident triage & log analysis
- **Security Tools:** Wireshark, Metasploit, Snort, Nmap, Netcat, John, Hydra, Burp, SQLMap
- **Systems:** Proxmox, Linux (Debian), Docker, backup & disaster recovery (ZFS snapshots, Restic), Git, GitHub, GitHub Actions CI; Windows, macOS, Kali, Ubuntu, Fedora
- **Languages & Tools:** Java, Python, C, C#, JavaScript, SQL, Dart; Flutter, PostgreSQL, JUnit, Valgrind

PROJECTS

Self-Hosted Security Lab: Proxmox Virtualized Home Server *Oct. 2025 – Present*

- Architected and secured a multi-host Proxmox environment running 9 isolated services, with a **segmented network** of three bridges (LAN, internal-only, air-gapped) and iptables NAT/firewall rules restricting cross-segment traffic.
- Hardened remote access with **SSH key-only authentication**, Fail2Ban on SSH and admin interfaces, and least-privilege Tailscale VPN ACLs scoped by device and service.
- Led an **incident investigation** into two unexplained outages: analyzed system and boot logs, ruled out compromise by auditing connections, processes, and scheduled tasks, isolated a faulty hardware driver, and verified a permanent fix.
- Automated **TLS certificate lifecycle management** (DNS-01) with centralized DNS filtering, and built **ZFS snapshot and offsite backup** workflows for safe rollback and recovery.

Musical Fruit: Senior Capstone (CS 481), Boise State University | Team Lead *Fall 2026 – Present*

- Team lead and primary developer on a six-person capstone building a web analytics platform for the Boise State Department of Music that presents de-identified, aggregate student data; built the **C# backend, Flutter frontend, SQL data layer, and Docker/GitHub Actions CI** pipeline.
- Maintain a mirrored repository on self-hosted Forgejo with **branch protection** on main; coordinate the team through a shared **Git and GitHub** workflow.

PROFESSIONAL EXPERIENCE

United States Marine Corps | Aviation Maintenance Technician *2017 – 2022*

- Served as department sergeant for a 40+ person team, managing assignments and readiness metrics, and trained and mentored junior personnel.
- Final quality-control inspector for aircraft repairs across a 28+ helicopter fleet (571 flight hours, zero operational delays); administered a $15K+ hazmat compliance program covering 250+ items.

West Ada School District | Technology Assistant, IT Intern *2017*

- Installed and configured hardware and software across 49 schools and supported technology access for 35,000+ students.

CERTIFICATIONS & EDUCATION

B.S. Computer Science, Cybersecurity Emphasis (3.89 GPA), Boise State University *Expected Dec. 2026*

Coursework: Network Security and Defense • Ethical Hacking • Computer Security • Computer Networks • Operating Systems • Algebraic Cryptography • Databases

CompTIA CySA+, in progress, coursework through Feb. 2027 *Expected 2027*

GIAC Certified Incident Handler (GCIH), SANS Institute *Aug. 2026*

GIAC Security Essentials (GSEC), SANS Institute *May 2026*

GIAC Foundational Cybersecurity Technologies (GFACT), SANS Institute *Feb. 2026*
