

NATHAN MARQUIS

Boise, ID 83712 | (208) 573-8008 | nathanmarquis23@gmail.com | [linkedin.com/in/nathanmarquis](https://www.linkedin.com/in/nathanmarquis)

PROFILE

Cybersecurity-focused Computer Science student (Cybersecurity Emphasis, Boise State University) and U.S. Marine Corps veteran with 5+ years of experience in technical operations, systems inspection, and team leadership. Designs, secures, and maintains a self-hosted virtualized infrastructure environment implementing network segmentation, firewall configuration, access control, and log monitoring backed by SANS/GIAC certifications (GSEC, GCIH, GFACT) and hands-on software development experience. Proven ability to manage complex technical systems, coordinate cross-functional teams, and deliver reliable results under pressure.

CORE COMPETENCIES

Network Security & Segmentation • Incident Response & Log Analysis • Vulnerability & Risk Management • Systems Hardening & Access Control • IT Support & Troubleshooting • Software Development • Team Leadership & Mentorship • Cross-Functional Communication

TECHNICAL SKILLS

- **Security & Networking:** Network segmentation, firewall/NAT configuration (iptables), TLS/PKI certificate management, DNS filtering & security, brute-force/intrusion defense (Fail2Ban), SSH hardening, incident triage & log analysis
- **Systems & Infrastructure:** Proxmox virtualization, Linux (Debian) administration, Docker, backup & disaster recovery (ZFS snapshots, Restic), Git
- **Languages:** Java, Python, C, JavaScript, SQL, Dart, Rust
- **Frameworks & Libraries:** React.js, Django, Bootstrap, Flutter
- **Databases:** PostgreSQL, SQL
- **Tools & Platforms:** Git, GitHub, Junit, Valgrind
- **Security Tools:** WireShark, Metasploit, Snort, Nmap, Netcat, John, Hydra, Burp, SQLMap, command-line utilities
- **Operating Systems:** Windows, macOS, Kali, Ubuntu, Fedora, Debian

CERTIFICATIONS & EDUCATION

Bachelor of Science, Computer Science with Cybersecurity Emphasis (3.89 GPA)

Expected Dec. 2026

Boise State University

Relevant Coursework:

- | | |
|--------------------------------|-----------------------------------|
| • Algebraic Cryptography | • Software Development in C |
| • Databases | • Software Engineering |
| • Data Structures | • Technical Communication |
| • Ethical Hacking | • Operating Systems (In Progress) |
| • Network Security and Defense | • Computer Security (In Progress) |
| • Programming Languages | • Computer Networks (In Progress) |

GIAC Certified Incident Handler (GCIH) Certificate

Aug. 2026

SANS Institute

GIAC Security Essentials (GSEC) Certificate

May 2026

SANS Institute

GIAC Foundational Cybersecurity Technologies (GFACT) Certificate

Feb. 2026

SANS Institute

Full Stack Web Development Course

2022

Code Platoon (Veteran organization)

CYBERSECURITY & INFRASTRUCTURE PROJECTS

Self-Hosted Security Lab — Proxmox Virtualized Home Server | 2026 *architected, deployed, and secured a multi-host virtualization environment running 9 isolated services, applying enterprise security practices at home-lab scale.*

- Designed a **segmented network architecture** across three isolated bridges (LAN, internal-only, air-gapped) with NAT/firewall rules (iptables) and explicit IP-forwarding controls to restrict cross-segment traffic
- Hardened remote access with **SSH key-only authentication**, Fail2Ban brute-force protection on SSH and admin interfaces, and least-privilege VPN ACLs (Tailscale) scoping access by device and service
- Implemented automated **TLS certificate lifecycle management** (DNS-01 challenge issuance/renewal) and centralized DNS filtering to secure and control service traffic
- Led an **incident investigation** into two unexplained system outages: analyzed system and boot logs, ruled out compromise by auditing network connections, active processes, and scheduled tasks, isolated the root cause to a faulty hardware driver, and implemented and verified a permanent fix
- Established **backup and disaster recovery workflows** using ZFS snapshots and scheduled offsite backups, enabling safe rollback before system changes and recovery from failed updates
- Maintained detailed technical documentation and standardized, repeatable deployment templates to ensure consistency and auditability

PROFESSIONAL EXPERIENCE

United States Marine Corps — Aviation Maintenance Technician

2017 – 2022

Various Locations

- Inspected, repaired, and maintained airframe and hydraulic systems for a fleet of over 28 helicopters, applying systematic troubleshooting and quality-control processes to enable safe, incident-free operations.
- Served as department sergeant, managing daily assignments, tracking readiness metrics, and overseeing operational planning for a 40+ person team.
- Administered a hazardous materials compliance program valued at over \$15K, maintaining accountability of 250+ items and ensuring adherence to environmental and safety regulations.
- Acted as final quality-control inspector for aircraft repairs, directly contributing to 571 successful flight hours with zero operational delays.
- Coordinated with logistics, supply, and command teams to plan a 3-month deployment, securing critical components across multiple service branches.
- Trained and mentored junior personnel, improving maintenance accuracy and team readiness through hands-on coaching and daily supervision.

West Ada School District — Technology Assistant, IT Intern

2017

Boise, ID (3-Month Internship)

- Installed and configured hardware and software across 49 schools, ensuring system readiness for the upcoming academic year.
- Supported access to learning platforms and technology for 35,000+ students by troubleshooting software issues and updating district systems.
